**Market Outlook**

The Australian share market managed to post its third consecutively monthly gain during February, pushing the S&P/ASX All Ordinaries Index back over the 5,000 mark for the first time in 10 months. In a familiar trend the impetus for the latest monthly rise came from a surging US share market, which jumped 3.2 per cent for the month. The best performing sector in the Australian market during February was the resources sector which continues to strongly outperform the overall market as demand out of China for commodities rise.

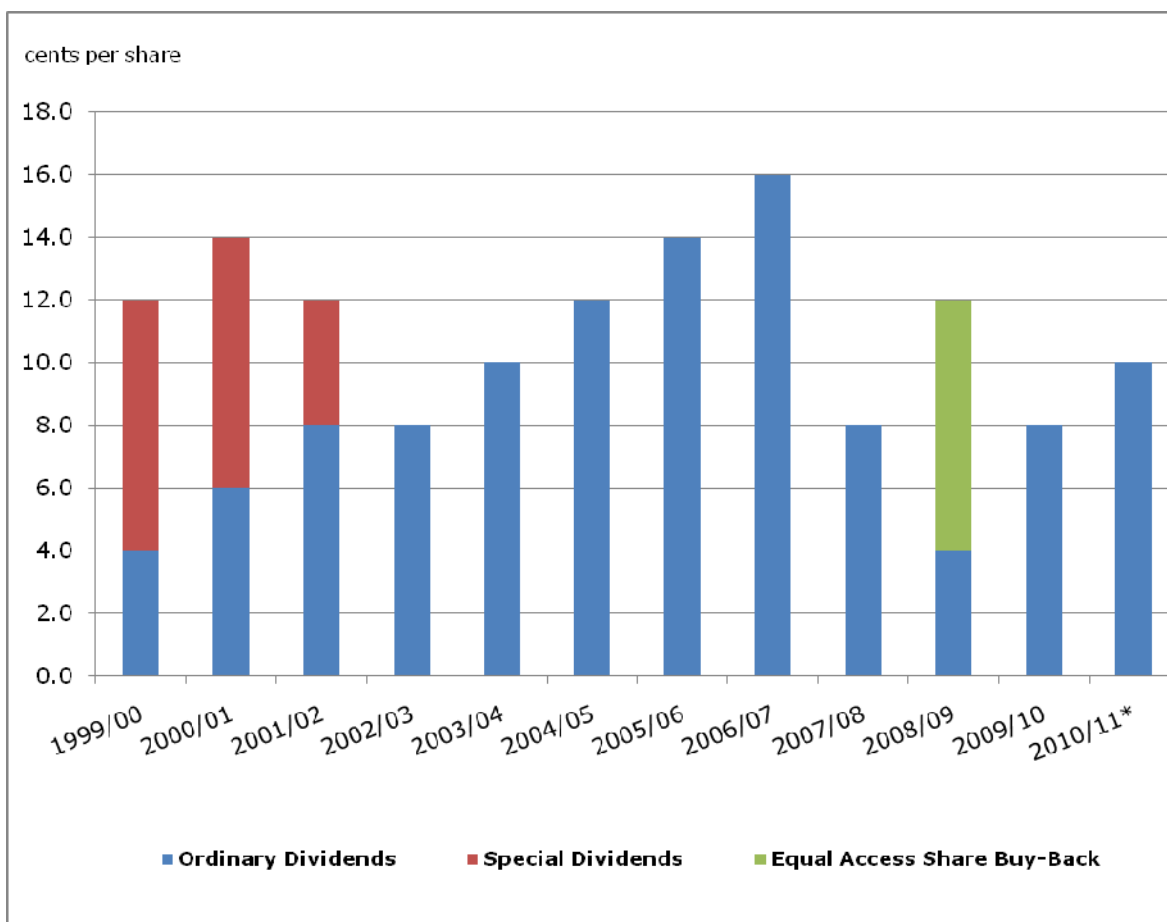

## Market Outlook (continued)

Towards the end of February and in early March shares around the globe have been sold off. This is not unexpected given the spectacular run most markets have enjoyed since July 2010. The trigger for the sell-off has been the spike in oil prices on the back of political unrest in the Middle East and North Africa. The violence has raised concerns about the supply of oil in the coming months causing oil prices to rise. In previous cycles sharp jumps in the price of oil has eventually led to a slowdown in Western economies causing share markets to sell off. The most recent lift in oil prices may only be short lived but it shows that global economic growth is still fragile and investors should be cautious about equities. Given the environment, we retain a conservative position looking for opportunities if equities are sold down.

## Dividends

On 11 March 2011 the company will pay a fully franked interim dividend of 5.0 cents per share. This is a 25% increase on the interim dividend last year.

The Board is committed to paying an increasing stream of fully franked dividends to shareholders provided the company has sufficient franking credits, and it is within prudent business practices. Dividends are paid on a six-monthly basis. Government legislation introduced in June 2010 now enables companies to pay dividends if the company is deemed solvent. Dividend payments will not be reliant on reported profit and retained earnings as it was previously. Rather it will be with consideration to cash flow, cash holdings and available franking credits. Essentially, WAM Capital will always be in a position to pay dividends providing it is solvent.
