NTA calculations are based on end of month figures (31/08/2014). Implied NTA calculation adjusted for LICs ex-dividend.

The key attributes we look for in an LIC:

- **Dividend sustainability** – It is important that an LIC has the ability to pay consistent and steady distributions to shareholders. Dividends paid by LICs are determined by management and unlike unlisted managed funds are not obliged to distribute all surplus income.
- **Market liquidity** – An LIC needs to have sufficient size to provide sufficient market liquidity.
- **Share price premium/discount to NTA** – We will target LICs that are attractively valued relative to historic levels and absolute value. While there are factors that contribute to an LIC trading above or below its NTA (including market liquidity), relative underperformance to NTA may be viewed as a trading opportunity or the chance to gain exposure to underlying holdings at a relatively cheaper level than that traded on market.
- **Board/Management Experience** – We look for a Board and Investment Committee with extensive market experience, a transparent investment philosophy and a consistent track record of meeting investor expectations.
- **An appropriate fee schedule** – Value for money and relatively low-cost management.

LIC Performance

Pre-tax NTA remains our preferred measure when comparing LIC performance. We understand the Pre-tax NTA figure can be distorted by some companies' investment decisions to reduce CGT sooner than others, however the longer term focus of a number of listed investment companies would imply the stock price should trade closer to the Pre-tax NTA than the Post-tax NTA.

*Returns are calculated assuming dividend reinvestment

We also look at the impact on premium/discounts by adjusting pre-tax NTAs for management fees. **We capitalise annual management fees at an estimate of 8x, thus adjusting NTAs lower.** This is only to be viewed as an indicative guide on highlighting the impact management fees may have on the relative value proposition, particularly for funds with management fees in excess of 1% per annum.

Aurora Absolute Return Fund (ABW)

Investment Style/Strategy

ABW is a listed vehicle which invests wholly into the Aurora Fortitude Absolute Return Fund (AFARF), an unlisted managed fund. ABW is a style neutral, absolute return oriented fund and aims produce positive returns irrespective of market conditions.

The underlying philosophy of ABW is that markets are more volatile than expected and so runs a long volatility options overlay that profits from extreme market movements. It then pursues other strategies that produce yield like returns including merger and acquisition trading, yield opportunities, share class arbitrage and long/short. The combination of these strategies delivers a defensive instrument that has produced positive returns every year since inception (2005). The fund may employ leverage.

Units in ABW can be bought or sold directly on the ASX or via a monthly off-market redemption facility at NTA. ABW also operates as a 'market maker' and provides a bid and ask quote to ensure investors can enter and exit ABW at a price close to NTA. This will promote liquidity in ABW and ensure a close correlation between NTA and share price.

Investment Manager

ABW is managed by Aurora Funds Limited (ASX: AFV). ABW is managed by John Corr (Chief Investment Officer & Director), Sheridan Hure (Senior Portfolio Manager) and Andrew Ward (Senior Portfolio Manager).

Aurora Sandringham Dividend Income Trust (AOD)

Investment Style/Strategy

AOD is a listed vehicle which offers investors exposure to the underlying investment strategy run by Aurora. AOD is run with the investment objective of outperforming the S&P/ASX200 over rolling five year periods with approximately half the volatility.

AOD invests in a portfolio of fully franked dividend paying companies listed on the ASX while employing a 'risk management overlay' to limit the exposure to Australian equities to around 50% of the net assets of the trust. Aurora believe that the market systematically undervalues franking credits and as such the portfolio adopts a ~100% long position in companies paying fully franked dividends and a ~50% short position in companies paying non-fully franked dividends through the year.

Units in AOD can be bought or sold directly on the ASX or via a monthly off-market redemption facility at NTA. AOD also operates as a 'market maker' and provides a bid and ask quote to ensure investors can enter and exit AOD at a price close to NTA. This will promote liquidity in AOD and ensure a close correlation between NTA and share price.

Asset Allocation

AOD targets net allocation ranges of 25-60% for cash (target 50%) and 40-75% for Australian equities (target 50%).
